Bengaluru

Consolidated report on special programs for advanced learners and slow performers

Dayananda Sagar College of dental sciences categorizes its students into advanced learners and slow performers based on their ability to learn and perform their regular academic related activities. Remedial teaching encompasses use of teaching-learning techniques and practices aimed at eliminating shortages the slow performers are perceived to have while at the same time, some of these teaching-learning techniques are also used to encourage & motivate Advanced Learners to perform better. Attempts are made to reduce or eliminate deficiencies in learning by re-teaching the content that may have been not grasped earlier by slow performers. On the other hand, engaging advanced learners on that kind of level is really vital to keep up their concentration level and motivation. Various remedial measures have been undertaken by our institution for both slow performers and advanced learners to improve and expand their level of understanding and ability. Some of the measures the institution has put in place to assist slow performers are counseling, remedial postings, assignments, one to one discussion, peer teaching and learning. For advanced learners, the institution looks to motivate, encourage & push them further to achieve greater laurels by making them attend & participate in various conferences, competitions, research studies and grants, scientific presentations, and workshops.
